Bluegiga Case Study
Jibajaba

The Jibajaba Information Manager

Jibajaba Limited specialises in implementing *Bluetooth* systems tailored to customers' needs. They supply a groundbreaking management system, the Jibajaba Information Manager (JIM) to police and public service organisations in UK.

The JIM allows Bluegiga *Bluetooth* Access Servers to be managed via an intuitive browser interface in real-time, wherever they are deployed. Tasks such as uploading content, changing the name of the system and changing parameters such as which messages will be sent when, can be achieved without physical access to the device. Operational statistics can be viewed at any time.

Access to the JIM is via an Internet browser with no requirement for the *Bluetooth* system to physically connect to the operators own network in any way, maintaining security integrity.

Paul Evenett, MD of Jibajaba (retired Police Officer who used *Bluetooth* systems operationally in London), "We found that one of the main reasons why *Bluetooth* users are not getting the most from their systems is that they are difficult to manage efficiently. London's Metropolitan Police have deployed the JIM for investigating Homicide and Serious Crime in the capital."
