

Bluegiga Case Study

Bosch Diagnostics

Bosch Automotive Aftermarket

The Bosch Group is a leading global supplier of technology and services in the areas of automotive and industrial technology, consumer goods and building technology. Bosch provides the workshops reliable diagnostics instruments that also recommend the appropriate measures to correct faults.

Bosch diagnostics are divided into different parts, including test equipment, software ESI[tronic], service training and technical hotline with online knowledge database. One important part is the test equipments, which are used for testing products. Bosch offers for the ECU diagnosis market diagnosis units, which can be used to check for example the OBD functions. Also, the new KTS range features variable functions, e.g. a pure ECU diagnosis tester, multimeter and even with 2-channel oscilloscope. One of the products that were developed for heavy -duty application in the car workshops is the KTS 540 wireless. This product is designed for workshops mechanics worldwide and the *Bluetooth* wireless application makes it easy to use. The product is equipped with Bluegiga's Class 1 WT11 *Bluetooth* module and also with a USB interface that enables the product to be hooked to any standard laptop.
