

Bluegiga Case Study

PVP Communications

Bluetooth motor headsets to help police officers at daily work

PVP Communications is an American company providing the most reliable equipment for professional motorcycle officers. The company knows how important it is to have the right equipment to work safely and effectively. PVP Communications provides professional and complete "turn-key" solutions for motorcycles that are easy to install and maintain.

A motorcycle officer's radio can be as important to him as his firearm. He needs communications that allow him to be in radio contact at all times – even while wearing a helmet and traveling at high speed. He must also be able to communicate safely and reliably while keeping his hands on the handlebars. PVP Communications came up with a simple *Bluetooth* solution; Wireless PVP Helmet Headsets. The whole idea behind applying *Bluetooth* technology to law enforcement motors is to simplify the officers' jobs, so they can be effective at work with minimal risk. The headset and motor are connected by a secure wireless link without needing complicated body-worn cables. The wireless headsets are equipped with Bluegiga's WT32 *Bluetooth* Audio Module.
